Associate Principal - Data Sciences | Business Data & Analytics
Strategy | Data Products & BI Platforms | R • Python • SQL •
ShinyApps | Trainer & Mentor | LTIMindtree Ltd. | B.Tech NIT
Jalandhar | MBA JAIN University
Bengaluru, Karnataka, India

Summary

As an Associate Principal – Data Sciences at LTIMindtree, I lead cross-functional teams of data analysts and engineers to design, build and scale business-critical analytics solutions for clients across industries. I focus on turning raw data into reliable, usable data products that support decision-making at operational and leadership levels.

With 14+ years of experience in data analysis, business intelligence and reporting, I have worked end-to-end across the lifecycle: from understanding business problems and defining requirements, to architecting data models, implementing robust pipelines, and delivering interactive dashboards, reports and self-service tools. I work extensively with R, Python, SQL, Databricks, VBA and Excel to create scalable, maintainable solutions rather than one-off reports.

In my current role, I am responsible for technical decision-making, establishing standards and best practices, and mentoring team members so that delivery quality and velocity improve over time. I collaborate closely with business stakeholders and leadership to prioritise roadmaps, balance quick wins with long-term architecture, and ensure analytics initiatives are aligned with measurable business outcomes.

Outside client work, I actively share knowledge through workshops, online courses and content on data analysis, Excel, R, Python and BI tools. I enjoy building internal tools, frameworks and learning resources that help teams become more effective and reduce repetitive work.

My goal is to combine strong technical skills with practical business understanding to build data and analytics capabilities that are simple

to use, reliable in production and meaningful for the people who depend on them.

Experience

LTIMindtree

5 years

Associate Principal - Data Sciences

April 2023 - Present (3 years 5 months)

Bengaluru, Karnataka, India

- Own end-to-end delivery of data products and BI platforms for business stakeholders.
- Lead multi-disciplinary teams of analysts and engineers, including code review standards and mentoring.
- Make key decisions on architectures, tech stack and data modelling approaches for analytics solutions.
- Partner with business and leadership to define analytics roadmaps, prioritise features and measure outcomes.
